

Chemical Demilitarization Program

Program Manager 256-895-1371

U.S. ARMY CORPS OF ENGINEERS

BUILDING STRONG®

The Department of Defense (DOD) was directed by Congress through Public Law 99-145 to be the government agency responsible for destruction of the chemical weapons stockpile. To comply with treaty agreements and congressional mandate, destruction of these weapons was to be completed by 2007. An additional five-year extension was exercised allowing the program to meet a 2012 deadline.

The Chemical Materials Agency (CMA) was created in February 2003 and combines the demilitarization and storage functions under a single organization. The program manager for Assembled Chemical Weapons Alternatives (ACWA) is responsible for the disposal of the chemical weapons stockpile in Colorado and Kentucky, and has a congressional deadline of 2017.

Blue Grass Chemical Agent-Destruction Pilot Plant in Richmond, Kentucky.

The U.S. Army Engineering and Support Center, Huntsville is the U.S. Army Corps of Engineers' agent for facility design and facility construction of chemical demilitarization facilities. The U.S. Army Rock Island Contracting Command, Rock Island, Ill., is the contracting agency.

Pueblo Chemical Depot, Colorado, and Blue Grass Chemical Activity, Kentucky

Public Law 104-208 established the ACWA program to study alternative technologies. In July 2002 DOD approved neutralization followed by biotreatment as the technology for the Pueblo facility. A systems contract was awarded in September 2002 to Bechtel National Inc. Neutralization followed by supercritical water oxidation was selected as the technology for the Blue Grass facility. A systems contract was awarded in June 2003 to the Bechtel-Parsons team.

Also in June 2003, the ACWA program formally changed its name to Assembled Chemical Weapons Alternatives to better reflect its newly expanded role: overseeing the full-scale pilot testing of neutralization technologies to destroy the chemical weapons stockpiles in Colorado and Kentucky. Design and construction activities are 99.8 percent complete at the Pueblo and Blue Grass facilities as of Oct. 1, 2015.

Bio-Threat Reduction Program - Kazakhstan

The Defense Threat Reduction Office – Biological is assisting the Defense Threat Reduction Agency (DTRA) in designing and building a Central Reference Laboratory, in Almaty, Kazakhstan — a state-of-the-art medical facility similar to the Centers for Disease Control in the United States. They will be studying and verifying issues such as Avian Bird Flu, Swine Fever and plague. The U.S. has an interest in this effort through DTRA in regard to foreign aid as well as stopping severe outbreaks before they spread to our local and distant interests. Huntsville Center is supporting DTRA by providing design and construction management oversight. Construction is expected to continue through 2016.
