

CERCLA Five-Year Reviews

Program Manager 402-697-2584

U.S. ARMY CORPS OF ENGINEERS

BUILDING STRONG®

Five-year reviews are required whenever a Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) response action results in hazardous materials remaining on site, above levels that allow for unlimited use and unrestricted exposure. A five-year review is intended to evaluate whether the remedial action remains protective of human health and the environment.

Five-year reviews answer three primary questions:

- Is the remedy functioning as intended by the decision documents?
- Are the exposure assumptions, toxicity data, cleanup levels and remedial action objectives used at the time of the remedy selection still valid?
- Has any other information come to light that could call into question the protectiveness of the remedy?

Since 1998, the U.S. Army Corps of Engineers has conducted hundreds of five-year reviews for our customers. By using capable in-house technical staff, with quality assurance support from the Environmental and Munitions Center of Expertise (EM CX), the Army Corps of Engineers has provided thorough and cost-effective reviews.

The cost to conduct a five-year review ranges from \$30,000 to \$150,000, depending on site complexity. This includes senior staff labor and travel.

Conducting a site inspection of the treatment plant at the Newmark Ground Water Contamination Superfund Site in San Bernardino, California.
