

Integrated Medical Furniture

Program Manager 256-895-1382

U.S. ARMY CORPS OF ENGINEERS

BUILDING STRONG®

The U.S. Army Engineering and Support Center, Huntsville's Integrated Medical Furniture (IMF) Program supports Army Medical Command (MEDCOM) facilities worldwide.

The program provides Integrated Modular Medical Support Systems (IMMSS), non-Modular Medical Furniture and artwork for hospitals, clinics, pharmacies, laboratories, dental clinics, veterinary clinics, administrative and logistical facilities, and research, training/classroom and medical warehouse functions.

Integrated Modular Medical Support Systems available through the IMF program allow for integrated facility solutions with the flexibility to accommodate changing medical technology and functional requirements. Products are modular and capable of being reconfigured and relocated anywhere within the facility, avoiding obsolescence because of changes to operations, equipment and personnel needs. They are durable, flexible and safe, have a professional appearance and are functional within a health care setting.

Integrated modular nurses' station with several other Integrated Medical Furniture Program clinical products in the treatment rooms.

Many medical facilities have simultaneous requirements for IMMSS and requirements for non-IMMSS furniture and furnishings, like wood furniture and case goods, artwork, waiting room furniture and lounge furniture. The IMF program supports multiple medical facilities worldwide.

Procedures

Huntsville Center processes delivery orders for IMF products, design, installation and related services. The IMF program is a success because of its innovative approach, significantly lowering contracting time and costs, and providing high user satisfaction. Orders are generally awarded in about 8 to 12 weeks, although orders requested during the fourth quarter of the fiscal year may require longer timelines depending on program workload.

The IMF program executes IMMSS orders through Blanket Purchase Agreements (BPAs) with Haworth, Herman Miller and Knoll established in 2010 and are based on U.S. General Services Administration (GSA) schedule contracts. The BPAs can be used to match products in existing facilities as well as outfitting new facilities. The BPAs have a total shared capacity of \$400 million. Pricing for IMMSS products have already been negotiated and defined in the BPAs, and transportation within the continental United States is included in that price. Pricing for design, installation, reconfiguration and restoration of existing IMF systems, transportation to overseas locations and other related services are determined separately for each delivery order based on the specific needs of the customer.

The IMF program typically executes non-IMMSS and artwork orders through actions on GSA schedule contracts. The non-IMMSS and artwork order pricing are based on prices established within the associated GSA schedules and can be executed for both continental United States and overseas requirements.

An example of the Integrated Medical Furniture Program work for an ambulatory care facility.
