

Base Operations (BASEOPS) Program

Program Manager 256-895-1863

U.S. ARMY CORPS OF ENGINEERS

BUILDING STRONG®

The Base Operations Program at the U.S. Army Engineering and Support Center, Huntsville provides a full spectrum of installation operations support to all facilities utilizing contracted manpower.

The BASEOPS Program consists of executing defined services structured around preventive and corrective maintenance. The objective is to preserve and maintain systems in such a condition that they may be effectively used for their designated functional purpose.

Preventive maintenance activities can be tailored based on the customer's operational needs and budgetary constraints. Customers may fund corrective maintenance incrementally using current year appropriations. This creates a budget friendly process for customers to pay for maintenance as it is needed and as additional funds become available.

Front entrance to Lincoln Hall at the National Defense University on Fort McNair in Washington, D.C. Huntsville Center's BASEOPS Program supports NDU facility maintenance.

The benefits of BASEOPS are one stop shopping for all installation facilities support requirements and the ability to award multiple year contract actions to reduce the chances of a gap in service. BASEOPS ensures the quality of services provided to the installation by using various tools for Quality Assurance: local U.S. Army Corps of Engineers personnel, existing installation personnel and qualified contractors.

Services offered

Facility Maintenance: Preventive, recurring maintenance and on-demand service order repairs to U.S. Government real property and infrastructure enabling facilities to function at full capacity for their intended use.

Roads and Grounds Maintenance: Focused activities to ensure safety, functionality, aesthetic appeal and to help preserve public spaces, facilities and surfaces. Examples are:

- **Tree and Shrub Maintenance:** Hazardous tree survey, complete tree removal, tree felling without removal, shrub removal, tree and shrub planting, pruning, disease prevention and urban forestry.
- **Snow Removal Services:** Removal of snow from paved and unpaved roads, sidewalks, parking lots, applying sand salt mixtures to all surfaces.
- **Drainage System Maintenance:** Clearing ditches, culverts and storm drains to prevent water damage and roadway deterioration.

Pest Control: Treatment for prevention of rodents and pests from government facilities and lands.

Waste Removal: Waste collection, recycling and removal services from government facilities.

Facility Assessments: Conduct evaluation of existing government facilities to determine their current condition, required repairs, furnishing needs and facility remaining life cycle.
