

Cybersecurity Systems Program

Program Manager 256-640-6155

U.S. ARMY CORPS OF ENGINEERS

BUILDING STRONG®

The U.S. Army Corps of Engineers, Engineering and Support Center Huntsville, Alabama provides quality oversight and management of cybersecurity inventories of Facility Related Control Systems including medical systems, assists multiple Department of Defense customers in obtaining an Authority To Operate under the Risk Management Framework requirements and provides Continuous Monitoring Support services once the ATO is achieved.

The cybersecurity requirement has been mandated for all DOD per the Risk Management Framework standards in accordance with the DOD Instructions 8500.01 "Cybersecurity" and 8510.01 "RMF for DOD IT" both updated and released in March 2014.

The Cybersecurity Systems Project Delivery Team is made up of the Control System Cybersecurity Mandatory Center of Expertise for FRCS, Cybersecurity Technical and Policy Experts, Project Managers, Contract Officers and Contract Specialists. The PDT works with the customer to define the needs and requirements of the project and ensures that the customer receives quality support.

The CS program offers the following services to customers worldwide through both in-house and contract resources:

- Conducts inventories of Facility Related Control Systems (including medical facilities) that will help the customer identify their current control systems and use the data in the RMF process.
- Provide artifacts and courses of action for obtaining an ATO.
- Conducts site surveys to assist the customer in establishing the RMF accreditation boundary.
- Analyzes existing system and recommend courses of action for meeting and maintaining compliance with DOD standards in order to obtain and maintain an ATO under the RMF requirements.
- Works with system owners to ensure that the system owner understands the process and requirements for obtaining and maintaining an ATO.
- Utilizes in-house reach back support from the CS MCX, the Electronic Security System, and the Utility Monitoring & Control System MCX to ensure cybersecurity changes won't negatively affect the operability of the system.
- Provides Continuous Monitoring Support Services to maintain the ATO once achieved.
- Supports customers in the development of Agency specific procedures for RMF implementation.

Huntsville's CS Program utilizes a Professional Services Multiple Award Task Order Contract to solicit and award task orders for the individual or combination of services listed above. The CS Program can also utilize Architect-Engineering Services contract vehicles if necessary to complete a requirement.

The CS Program and the Cyber MCX has been successful in obtaining ATOs of control systems for various customers.
