Building is treated wood construction with plywood siding. Use roll roofing materials.

Provide positive drainage away from structure.

Minimum size for wood target stand is 2' x 3' wide, 3' x 3' deep, with height as required for the top to be 3' 14" below the window sill. Provide an AR500 steel plate 1/2" thick and 2' x 3' high bolted to the framing at both target locations. Use 3/4" TRUNKING conduit for 1/2" and below. Additional protection is required for larger caliber weapons.

Provide target power and data outlets for two targets. Run conduits for power and data to load center and MTP in a separate electrical. Refer to ACH 6-01 for details.
